COLLEGE OF ARTS AND SCIENCES

SUMMER RESEARCH OPPORTUNITIES
FOR UNDERGRADUATE WOMEN

APPLICATION DEADLINE: March 1, 2011

The Departments of Biological Sciences and Mathematical Sciences are pleased to offer the following research project for the summer of 2011. Interested students are urged to contact the faculty members directing the project that most interests them. By contacting the faculty member, you can discover more about the project, learn what your responsibilities will be and, if possible, develop a timetable for the twelve-week research period.

PROJECT TITLE: Genetic Diversity in Island Populations

Professors Steven Rogstad and Stephan Pelikan

1601/1602 Crosley Tower / 806F Old Chemistry
Cincinnati, OH 45221-0006
Tel: (513) 556-9744 (Rogstad)/ (513) 556-4084 (Pelikan)
Email: steven.rogstad@uc.edu and pelikan@math.uc.edu

Project Description

The genetic diversity of populations is one of the most important characteristics affecting their survival and evolution. We will be using various techniques, especially computer modeling, to explore how genetic diversity changes in newly founded populations as they spread across island systems. Factors to be explored include: 1) size and genetic diversity of the source (mainland) population; 2) the geography of the islands (arrangement, size, shape, distance from mainland) 3) effects of different life histories and dispersal strategies and 4) age-specific reproduction and mortality schedules.

The information we gain will not only be of import for island systems, but also has increasing relevancy as large portions of the world become more fragmented, and in species conservation/restoration projects, which are often islandic in nature. Participants will increase their understanding of population genetics and processes, and will learn to utilize new computer programs to simulate natural processes and to analyze data.
